

RXREC Receiver Unit

RXREC Receiver Unit - Wireless Control Conversion

Consort Claudgen's RXREC is a receiver unit that enables certain heaters controlled by a remote switch to be wirelessly controlled by a CRXSL controller*. With RXREC installed, a CRXSL controller replaces the existing remote switch, expanding the heating control options to include temperature and time control. Additionally, the Time/Manual mode in a CRXSL controller takes advantage of the RXREC long range performance to allow heaters to be controlled from a different room.

- Can be retrofitted to existing compatible Claudgen products (see RXREC matching products list)
- Each heater must be connected to an RXREC for it to be controlled by a CRXSL
- Multiple heaters can be controlled by a CRXSL
- Long range performance dependent on building construction
- Dimensions (mm):- H:90 D:61 W:158

* Requires a separately purchased CRXSL controller.

CRXSL Controller Features

- Mains or battery powered
- Temperature programme mode:
 - 6 temperature programmes per day
 - 7-day heating programmes per week
- Time/Manual mode:
 - Allows fan and heat settings to be adjusted manually
 - Allows set time schedule for fan and heat settings
- Stylish and sleek modern design
- Large backlit LCD display for easy reading
- Simple to set up and easy to programme
- Child lock
- Temperature display of either degrees Celsius or Fahrenheit

Energy Saving Features in Temperature Programme Mode

- 6 temperature programmes per day
- 7-day heating programmes per week
- Power reduced when approaching target temperature
- Maintains temperature within 0.5°C
- Set temperature in 0.5 degrees increments
